Practical III

Roll No.:T007	Name:Subhashree Jean
Class:TYIT	Batch:01
Date of Assignment:02-09-2026	Date/Time of Submission:09-09-2026

Practical 3: Issue Types & Configuration

A. Create and configure Issue Types (Epic, Story, Task, Bug)

Step 1: Open the FSP Board

Process:

1. Open Jira.
2. Open the FSP (Full Stack Project) board.
3. You will see a Kanban Board.
4. The board contains different columns:
 - o Backlog
 - o Selected for Development
 - o In Progress
 - o Done

Step 2: Go to Backlog

Process:

1. Open the Backlog column.
2. Click Create.
3. A new issue card will appear.
4. You will see the field "What needs to be done?"

Step 3: Enter the Work Name

Process:

1. Click inside "What needs to be done?"
2. Enter the name of your work.
3. Example:
Team Interaction

Step 4: Select Issue Type

Process:

1. Click the Issue Type icon/drop-down on the issue card.
2. You will see different issue types.
3. Select the appropriate type.
 - Epic: A large body of work.
 - Task: A specific piece of work.
 - Bug: A problem or defect in the project.

Step 5: Create a Task

Process:

1. Select Task from the issue-type list.
 2. Enter the task name.
 3. Example:
Team Interaction
 4. Click Create/Enter.
- The task will appear as a card in the Backlog.

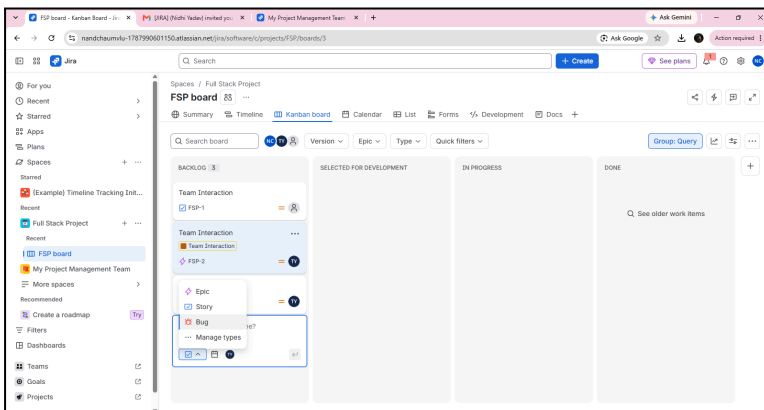

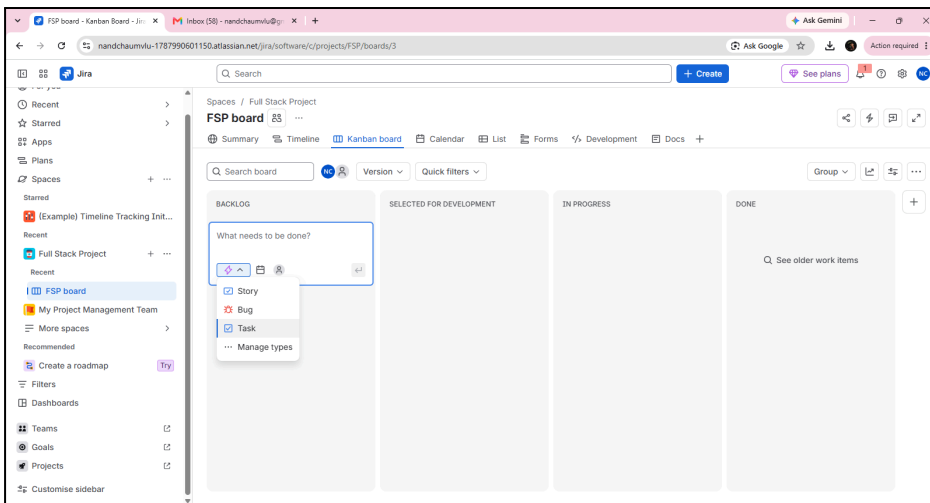

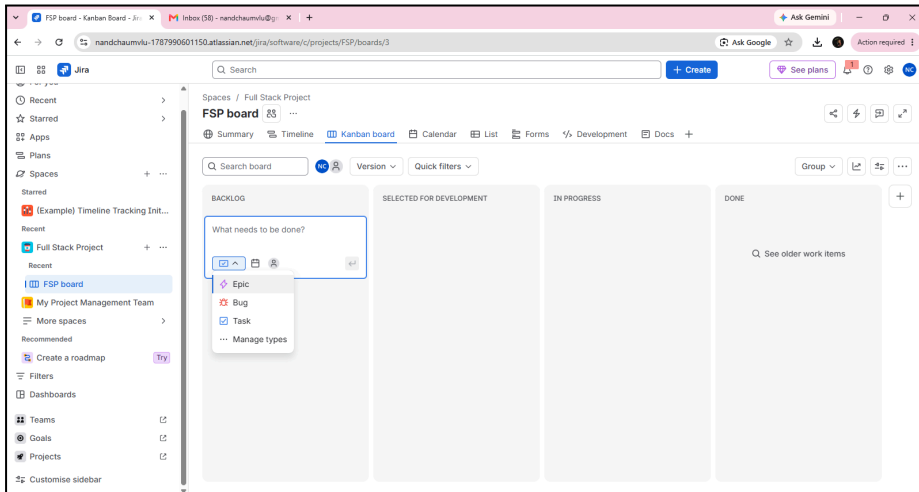

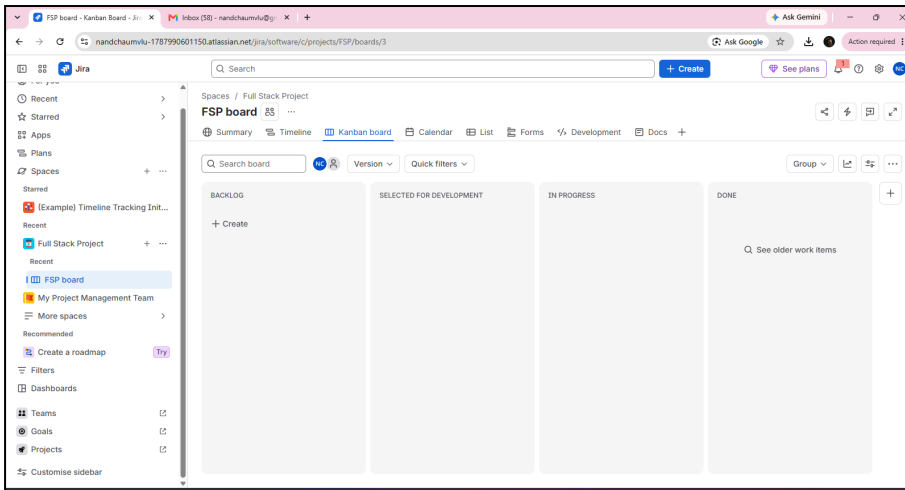

Step 6: Create a Bug

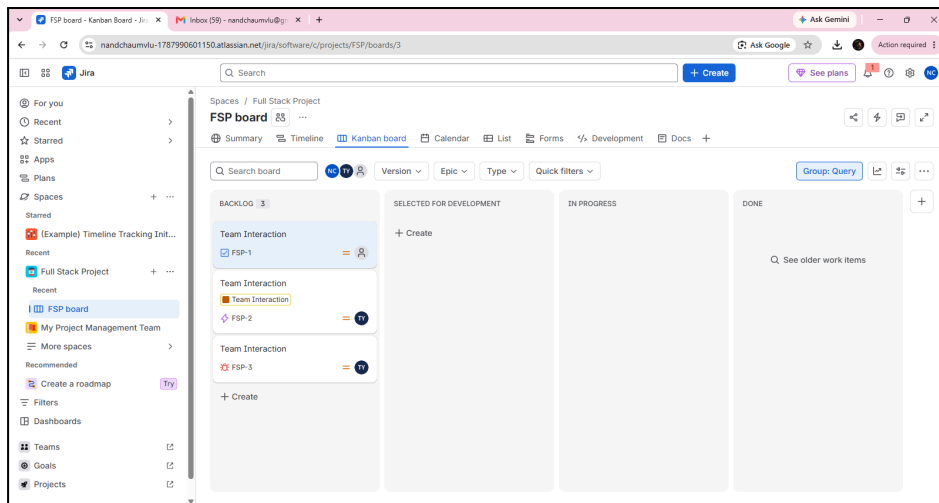

Process:

1. Create another issue.
2. Click the Issue Type option.
3. Select Bug.
4. Enter the bug name.

5. Click Create/Enter.

The bug will appear with the Bug issue type/icon.

B. Create Components and Versions.

Part 1: Create a Release/Version

Step 1: Open Space Settings

Process:

1. Open your project.
2. Go to Space Settings.

This is where you can manage project-related settings.

Step 2: Create Release

Process:

1. Click Create Release.
2. Enter the required details.
3. Click Save.

Explanation:

A Release/Version is used to identify a particular version or release of the project.

Step 3: Check the Version List

Process:

1. After saving the release, open the Version section.
2. Check the Version List.
3. Your newly created version will appear there.

Explanation:

The Version List shows the releases/versions that have been created for the project.

Part 2: Create Components

Step 1: Open Components

Process:

1. Go to the project settings.
2. Click Components.
3. Click Create Components.

Explanation:

Components are used to divide a project into different parts or modules.

Step 2: Enter Component Details

Process:

1. Enter the required component details.
2. Click Save.

Explanation:

Saving the details creates the component in the project.

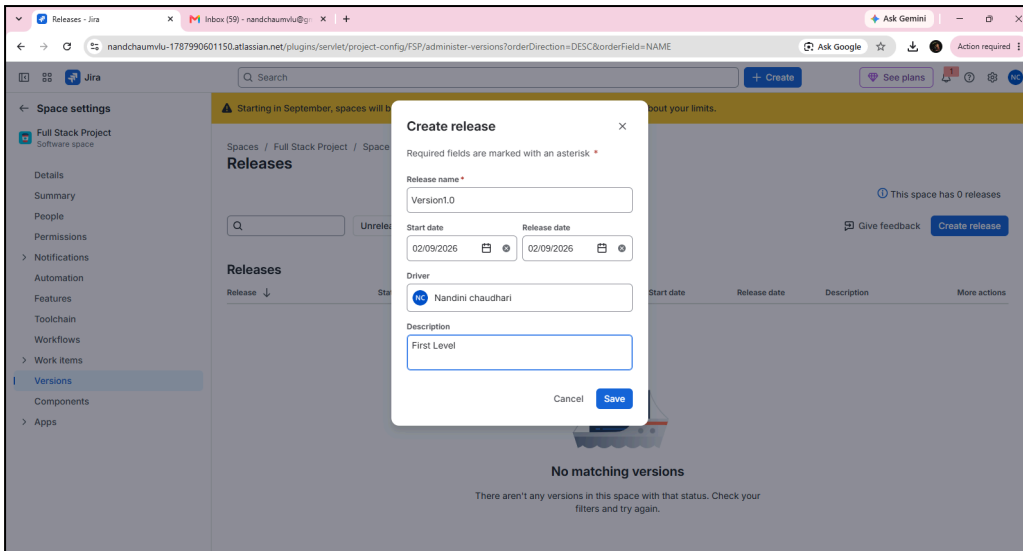

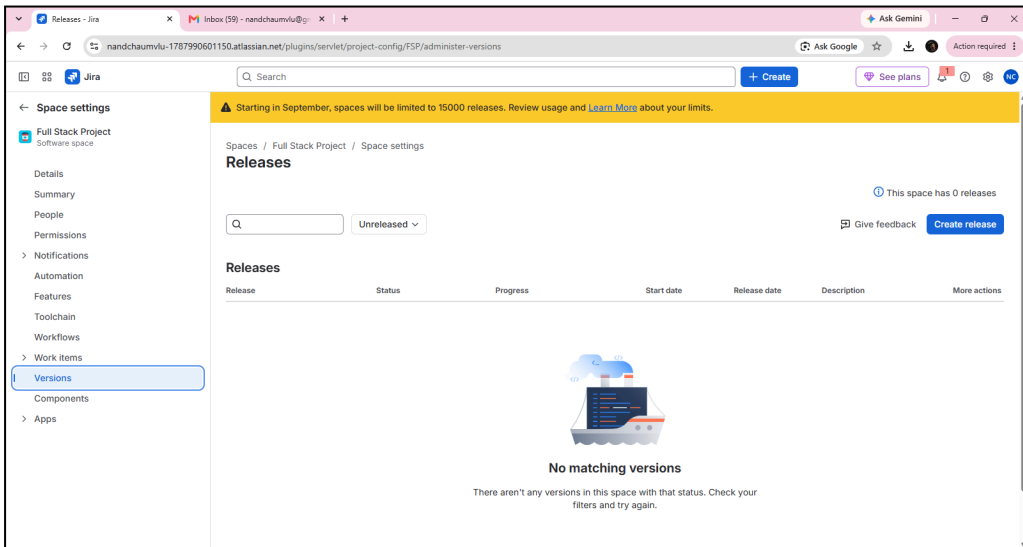

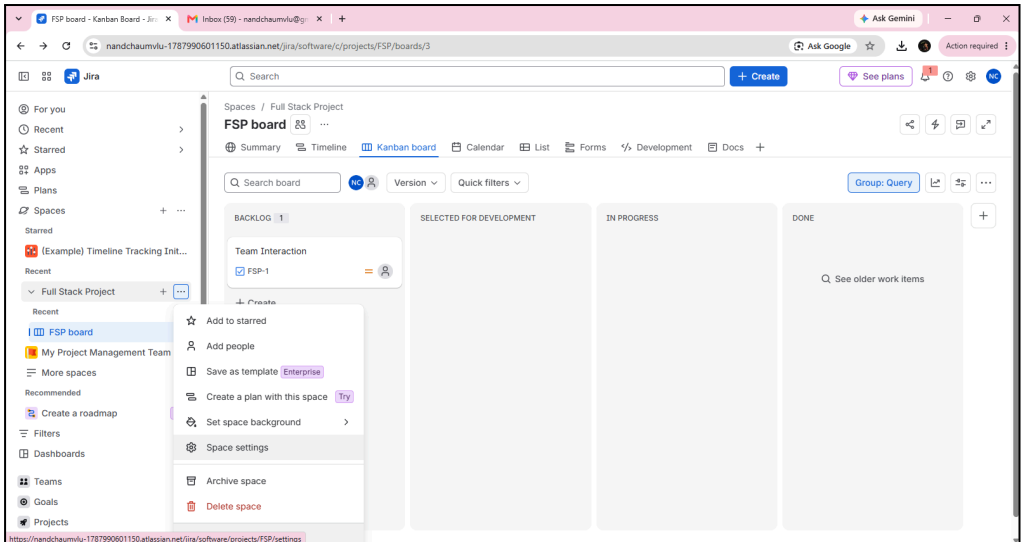

Step 3: Check Component List

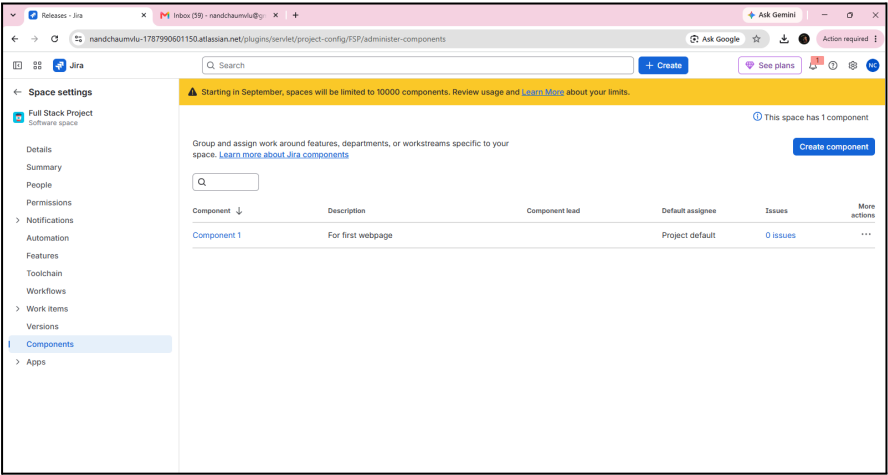

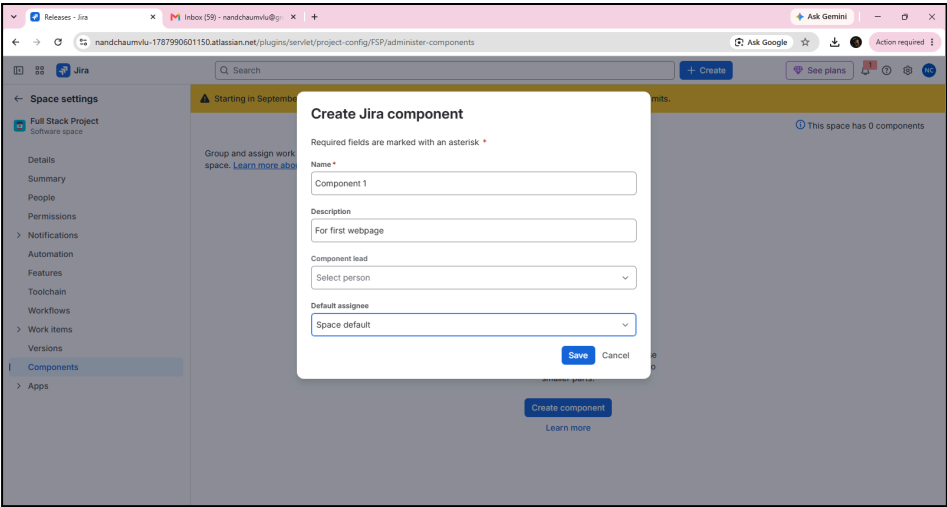

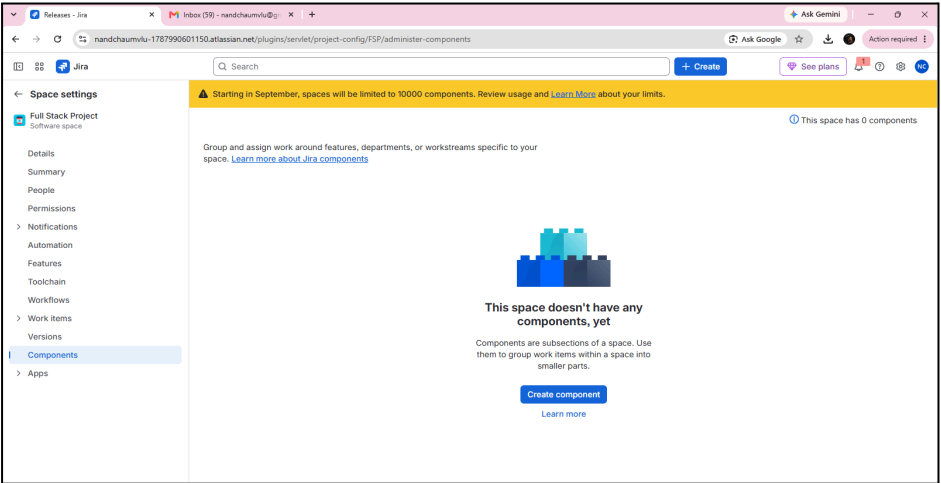

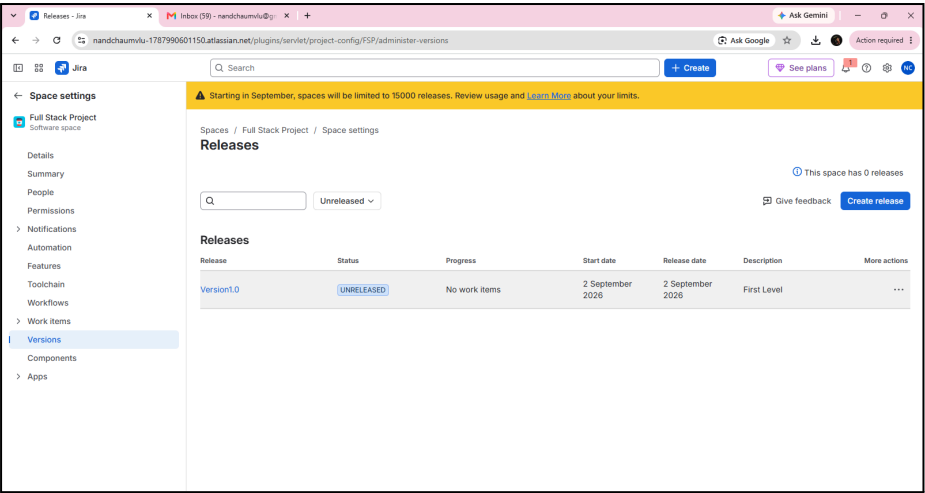

Process:

1. After saving, open the Components section.
2. Check the Component List.
3. Your newly created component will appear in the list.

Explanation:

The Component List displays all the components created for the project.

Easy Flow to Remember

3A – Issue Types

Jira → FSP Board → Backlog → Create → Enter Work Name → Select Issue Type → Create Task → Create Bug

3B – Components & Versions

Space Settings → Create Release → Enter Details → Save → Version List → Components → Create Component → Enter Details → Save → Component List

Conclusion

Thus, we successfully created and configured different issue types such as Task and Bug. We also created a Release/Version and Components in the Full Stack Project. These features help to organize and manage project work properly.
